Product Change Request: Institutional Digital Asset Custody & Staking

Qualified Custodial Depository & Proof-of-Stake Validation for Registered Funds

Initiative Ref:	PCR-2026-1042	**Change Type:**	New Product Launch
Business Division:	Institutional Wealth & Custody	**Risk Officer:**	Marcus Vance, VP
Target Go-Live:	2026-10-30	**Screening Status:**	Clean (Pre-Screened)

1. Overview & Business Rationale

Institutional Wealth & Custody proposes the launch of a segregated Digital Asset Custodial Service for registered investment advisers (RIAs), private equity funds, and accredited family offices. The product allows institutional clients to hold institutional digital assets (ETH, SOL, USDC) in bankruptcy-remote qualified custody accounts with an optional validator staking yield module.

2. Customer Segment & Key Entities

Target Customer Segment: institutional digital asset managers, SEC-registered funds, and qualified institutional buyers.

Anchor Institutional Client: Aegis Digital Capital LLC, a Delaware registered investment fund with $280M AUM.

Chief Compliance Officer: Dr. Helena Vance (Key Individual). Beneficial Owners: Arthur Pendelton (35%), Michael Chang (35%).

Customer type: registered investment adviser / institutional fund.

3. Operational Jurisdictions

The service will be offered exclusively to entities legally organized within the United States: New York, Delaware, and California. Non-US residents and foreign jurisdictions are strictly excluded from V1.

4. Transaction Mechanics & Cash Profile

Physical Cash Intensity: 0% physical currency. No physical cash, money orders, or teller operations are permitted.

Deposits & Withdrawals: Fedwire USD settlement for fiat on-ramp; multi-party computation (MPC) cold storage for digital assets.

Projected Volume: $45M custodial AUM in Q4 2026, generating approximately 15-30 staking and settlement events per week.

5. Third-Party Vendor Relationships

Qualified Sub-Custodian: Anchorage Trust Corp (South Dakota chartered trust company).

Key Infrastructure: Fireblocks Inc (MPC key management architecture) and Chainalysis KYT (real-time blockchain analytics).

6. Compliance & Target Launch

Target Launch Date: October 30, 2026. The novelty of cryptographic validator staking warrants moderate product risk classification, audited smart-contract verification, and ongoing SOC-2 Type II controls.
